

ABSTRACT OF THE DISCLOSURE

A method for providing broadcast network services from a server by providing a broadcaster with access to an application tool, a storage device, and a streaming media tool bundled together so the broadcaster can create, upload and/or store program files using the application tools, transmit the program file to the members as streaming media, and also
5 allow the member to download auxiliary files associated with the program file, rate the content of the program file, and/or send communications to the broadcaster related to the program file.
